## MOISTURE ANALYZER

The NIR 6500 Series of IR Laboratory Moisture Analyzers facilitate methods of experimentation, testing, research and analysis in controlled environments. IR Laboratory Moisture Analyzers can be used independently or in conjunction with Sensortech's process and hand-held instruments.

The NIR-6500 provides an instant off-line or at-line moisture measurement isolated from variations caused by manufacturing environments.

- A sealed sample container ensures no moisture change during testing.
- The wide measurement area integrates a large sample without a turntable.
- One-second measurement time.

The NIR 6500 Series analyzers are ideally suited for benchmarking your production process or for autonomous product analysis.

The NIR-6500 Laboratory Moisture Analyzer features a large color touch screen providing user-friendly configuration and calibration. It readily connects to plant networks for data sharing and archiving.

**Sensortech Systems, Inc.** is the trusted name in moisture measurement and control for over 35 years. Whether you are a first-time customer or have been a client for over 30 years, you can be assured that Sensortech's commitment to customer satisfaction is still our highest priority. Our reputation for customer support has been built with superior quality instruments and the unmatched support that complements their performance.
